

# Release VB005

Improved Mode/Power button. Long press to start / Long press to shutdown

Bluetooth Connections are managed, SkyView will only connect to paired devices.

Unlike before it was connecting to any vario.

## What's New in VB005

### BLE Connection Managed

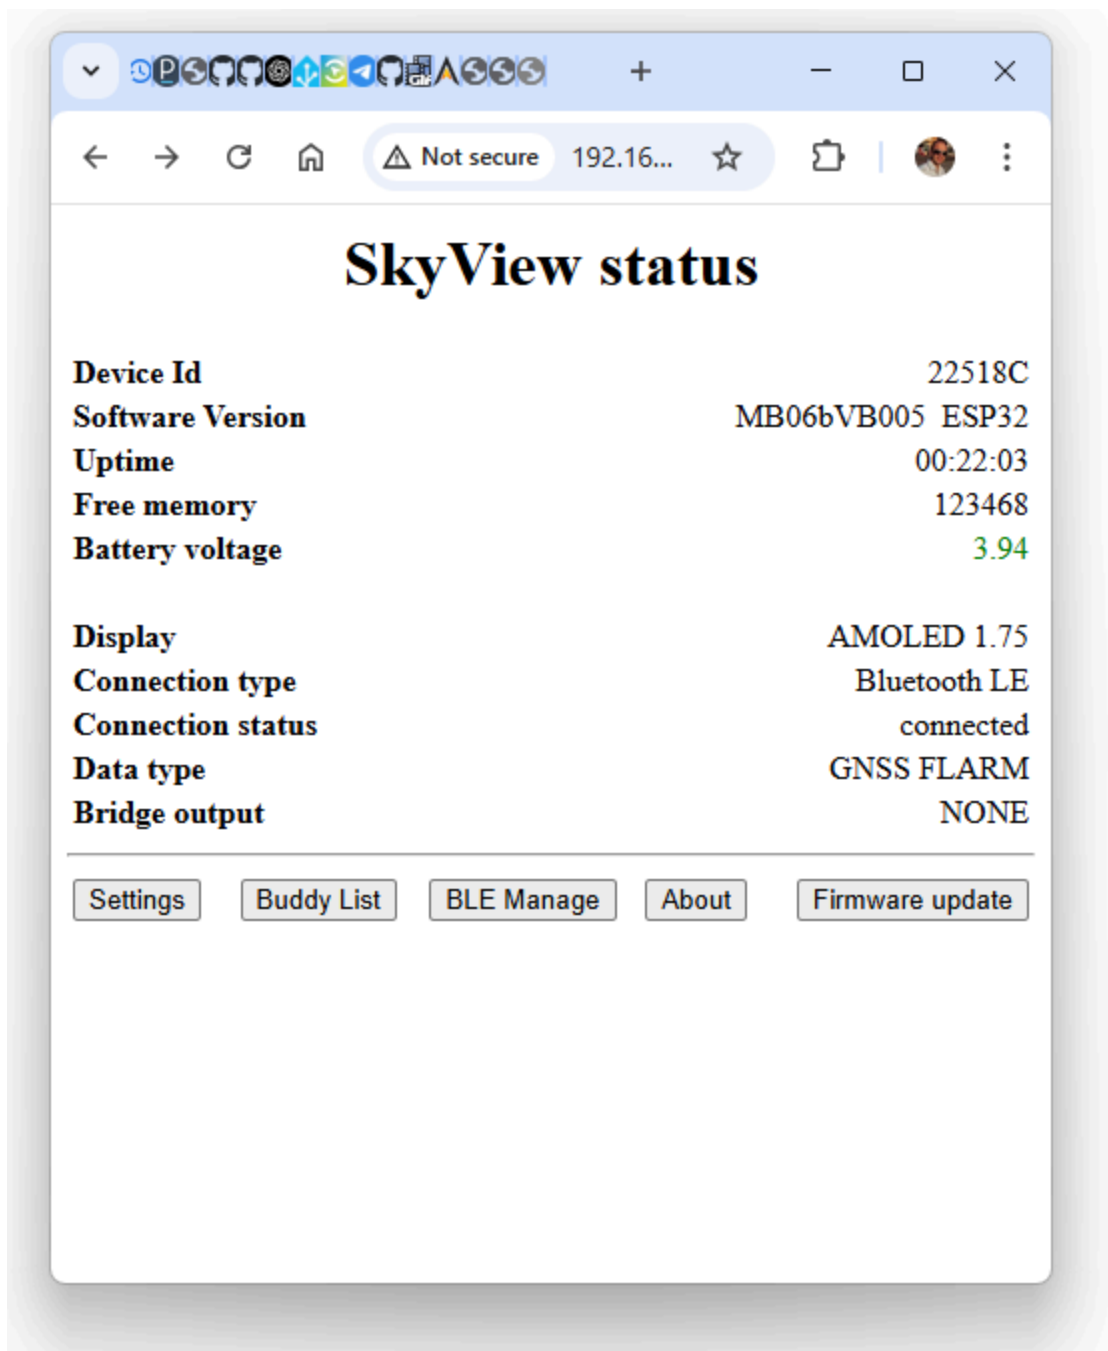

- SkyView will only connect to **Paired BLE devices** (unlike before it would connect to any Bluetooth device, which could cause issues on a busy takeoff).
- To pair your SoftRF (or another) bluetooth device.

#### 1. Connect to SkyView WiFi

- Power on your SkyView device.
- Connect your computer or phone to the SkyView WiFi access point (available for 10 minutes after powering on). **Default password: 12345678**

#### 2. Access the Web Interface

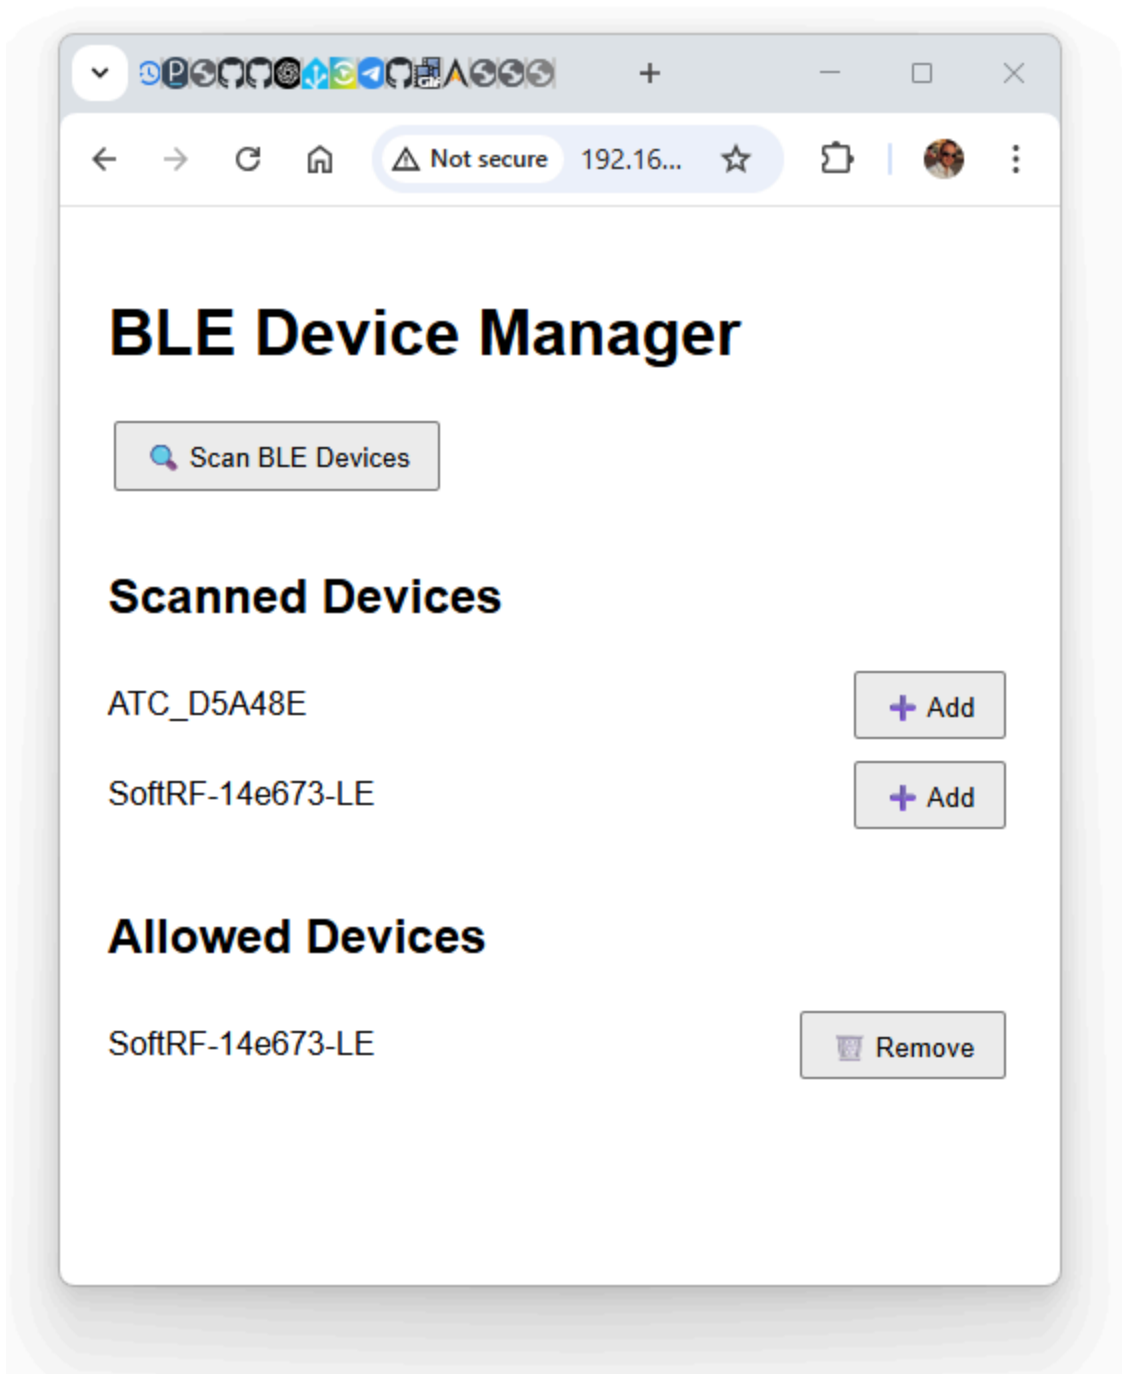

- Open your web browser.
- Navigate to <http://192.168.1.1>.

### 3. Click BLE Manage button.

- Click Scan for BLE devices.
- Click Add next to the found SoftRF device.
- That's all

**Note:** You can also Remove previously paired devices on the same page.

### Improved Mode/Power Button Functionality

- **To Power Off:** Long press when device is on.
- **To Power On** Long press ( >2 seconds) whils device in sleep mode.
- The device will not be accidentally powered on by momentarily pressing the button.

- **Short press (during normal operation):** Cycles through the screens in order: Radar → Traffic Info → Compass → Radar.

**Note:** If you disable the Compass page in Settings, the screen will simply alternate between Radar ⇄ Traffic Info pages.

### ***Easy Firmware Update***

- Watch the video above for instructions on how to **update SkyView firmware** via the built-in **Web Interface**.
